ABOUT

Software Engineer with 7+ years of experience building and improving backend systems with Node.js, TypeScript, Python, and AWS. What drives me is ownership — finding what's actually broken, understanding why, and fixing it at the root. I'm comfortable raising my hand when something isn't working and taking initiative to address it, whether that's a data loss bug, a fragile CI/CD pipeline, or missing test coverage. I work best in small, autonomous teams where engineers are expected to think beyond their tickets. I use AI tools daily as part of my engineering workflow.

EXPERIENCE

Software Engineer · NewCombin · Sept 2021 – Aug 2026 · 4 yrs 11 mos

Primary backend engineer across multiple client projects spanning edtech, media, and travel industries.

- Diagnosed and resolved a data loss issue during live broadcast events — traced the root cause to a race condition introduced in a DynamoDB-to-MySQL migration, implemented Redis-based vote buffering, optimized critical database queries, and configured CPU-based EC2 autoscaling. Validated with JMeter load tests at 30,000 votes/minute with zero data loss (5x capacity increase).
- Built and extended RESTful API integrations with social media platforms (Instagram, TikTok, Facebook, Vimeo) enabling direct video and image publishing with metadata from a media management platform.
- Improved engineering practices across projects: introduced unit testing for critical business logic, refined Git branching strategy, added CI/CD validation steps in Bitbucket Pipelines, and automated deployment of frontend sub-applications with different delivery architectures (CDN via S3+CloudFront and server-side bundling).
- Containerized local development environments with Docker Compose, eliminating dependency conflicts during developer onboarding.
- Collaborated with Product Managers on agile backlog refinement and sprint planning, and provided technical guidance to a junior engineer.

Software Engineer & Co-Founder · Verdant Solution · Aug 2016 – Aug 2022 · 6 yrs

Co-founded a custom software development company serving clients in the graphic arts industry.

- Designed and built a print optimization system using a microservices architecture: a Node.js/TypeScript backend orchestrating async PDF generation jobs via RabbitMQ, a Python microservice handling layout computation with Ghostscript to minimize material waste, WebSocket-based real-time order status updates, and S3 for artifact storage.
- Reduced PDF data extraction time by 75% by developing a Node.js RESTful API backed by a Python microservice to process uploaded files.
- Decreased internal approval workflow completion time by 50% by implementing real-time file flows using WebSockets (Socket.IO).
- Reduced development environment setup time by 40% by containerizing the full stack with Docker and managing processes with PM2.

Software Engineer · COMBINATORIA · Jan 2019 – Sept 2021 · 2 yrs 9 mos

Full stack engineer on a maritime operations management platform — vessel schedules, cargo, and voyage tracking.

- Reduced development time for new operational boards by 50% by integrating DevExpress component suite with server-side filtering, sorting, and grouping via a custom RESTful API built with Node.js and Express.
- Built and maintained REST APIs and Angular interfaces for vessel and cargo management, including ABM flows, voyage tracking, and scheduling features.
- Refactored legacy codebase to improve maintainability and reduce implementation effort for new features.

Full Stack Developer · NetRacer · Jul 2020 – Dec 2021 · 1 yr 6 mos · Freelance

- Reduced tournament results processing time by 60% by building a module that automates XML file analysis from game output.
- Integrated Facebook OAuth API for user authentication and photo sharing, eliminating a previously manual verification process.

SKILLS

Backend: Node.js, TypeScript, JavaScript, Python, Express.js, Django, RESTful APIs, Swagger, WebSockets, Microservices, RabbitMQ, Redis

Databases: PostgreSQL, MySQL, DynamoDB, MongoDB, Sequelize, Drizzle ORM

Infrastructure: AWS (EC2, S3, CloudFront, CodeDeploy, SQS, SNS), Docker, CI/CD, Git

Testing & Practices: Unit Testing, Integration Testing, Jest, TDD, JMeter, Sentry, CloudWatch, Docker Compose, PM2, JIRA, Agile/Scrum

Frontend: React, Angular, Vue.js

EDUCATION

Information Systems Engineering · Universidad Tecnológica Nacional (UTN) · 2014–2019

LANGUAGES

English: Advanced (professional working proficiency) **Spanish:** Native
